

Problem Statement No.13 - Fitness Buddy

Background

Modern lifestyles make it difficult for people to maintain regular exercise, balanced nutrition, and healthy habits. Many individuals lack access to affordable, personalized fitness coaching. Existing fitness applications often require paid subscriptions, fixed workout schedules, or professional trainers, making them inaccessible for students and busy professionals.

Problem Description

Develop an AI-powered virtual fitness assistant called **Fitness Buddy** that provides personalized health and wellness guidance through natural conversation. The assistant should understand user goals, fitness levels, daily routines, and preferences to deliver customized recommendations while encouraging long-term healthy habits.

Objectives Recommend home workouts based on age, fitness level, goals, and available time. Provide daily motivation, reminders, and progress encouragement. Suggest simple, nutritious meal ideas and healthy eating tips. Promote habit-building through achievable daily and weekly goals. Offer 24/7 conversational support that is easy to use. **Key Features** User profile creation (age, height, weight, goals, activity level). Personalized workout plans. Basic nutrition guidance and hydration reminders. Daily fitness challenges and motivational quotes. Progress tracking and habit monitoring. Conversational AI interface. **Expected Outcome**

Fitness Buddy should make fitness guidance affordable, accessible, and personalized. It should help users stay motivated, improve consistency, and develop healthier lifestyles through AI-powered recommendations.

Technology Requirement

The solution must use IBM Cloud Lite services and IBM Granite models as mandatory technologies for AI capabilities, deployment, and conversational intelligence.
